PATENT  
450100-4138.1

### IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

#### Listing of Claims

1. (Currently Amended) An information providing apparatus, comprising:  
hierarchizing means for hierarchizing electronic program guide information to be provided into first information which designates predetermined information on specific broadcasts of a program and second information to be referred to by the first information for general information on said program,

wherein the first information, which may change, comprises electronic program guide information associated with a program; and

wherein the second information, which may not be changed, comprises electronic program guide information associated with a program;

first providing means for providing at least one of the ~~hierarchized~~ first information and the second information; and

second providing means for providing layout information ~~from within the electronic program guide information~~ which relates to a layout of the electronic program guide information when the electronic program guide information is to be displayed on a screen, and wherein the first information and the second information each include a tag to enable data included therein to be associated with the layout information.

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

2. (Original) An information providing apparatus according to claim 1, wherein said first providing means provides the first information or the second information by radio or wire communication or by a recording medium, and said second providing means provides the layout information by radio or wire communication or by a recording medium.

3. (Original) An information providing apparatus according to claim 1, wherein said first providing means provides the first information by radio or wire communication when a broadcasting time of a program is changed.

4. (Original) An information providing apparatus according to claim 3, wherein said first providing means provides the first information in a superposed relationship with a vertical blanking period of a television signal.

5. (Original) An information providing apparatus according to claim 3, wherein said first providing means provides the first information digitally in a superposed relationship with a television signal.

6. (Original) An information providing apparatus according to claim 1, wherein said first providing means and said second providing means provide the first information and the second information as well as the layout information digitally by means of radio or wire communication.

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

7. (Original) An information providing apparatus according to claim 1, wherein said hierarchizing means determines that information of the electronic program guide information which is changed between regular broadcasting and rebroadcasting as the first information and determines that information of the electronic program guide information which is not changed as the second information.

8. (Currently Amended) An information providing apparatus according to claim 1, wherein

~~said hierarchizing means determines the first information comprises that~~  
information of the electronic program guide information which ~~is changed~~ may change between key station broadcasting and local station broadcasting ~~as the first information and determines that information of the electronic program guide information which is not changed as and the~~  
second information comprises that information of the electronic program guide information which is not changed.

9. (Original) An information providing apparatus according to claim 1, wherein said hierarchizing means hierarchizes the second information further into third information which is small in amount and is referred to by the third information and fourth information which is large in amount and is referred to by the first information or the third information.

10. (Original) An information providing apparatus according to claim 9, wherein the first information is information in units of a program to be broadcast and the third

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

information of the second information includes information for identifying a performer who constructs the program while the fourth information of the second information includes information regarding details of a performer who performs in the program.

11. (Currently Amended) An information providing method, comprising the steps of:

hierarchizing electronic program guide information to be provided into first information which designates predetermined information on specific broadcasts of a program and second information to be referred to by the first information for general information on said program,

wherein the first information, which may change, comprises electronic program guide information associated with a program; and

wherein the second information, which may not be changed, comprises electronic program guide information associated with a program;

providing at least one of the ~~hierarchized~~ first information and the second information; and

providing layout information from ~~within the electronic program guide information~~ which relates to a layout of the electronic program guide information when the electronic program guide information is to be displayed on a screen, and wherein the first information and the second information each include a tag to enable data included therein to be associated with the layout information.

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

12. (Currently Amended) A ~~transmission medium for transmitting computer~~  
program product comprising a program, the program including being operable to perform the  
steps of:

hierarchizing electronic program guide information to be provided into first  
information which designates predetermined information on specific broadcasts of a program  
and second information to be referred to by the first information for general information on said  
program;

wherein the first information, which may change, comprises electronic program  
guide information associated with a program; and

wherein the second information, which may not be changed, comprises electronic  
program guide information associated with a program;

providing at least one of the hierarchized-first information and the second  
information; and

providing layout information which relates to a layout ~~when of~~ the electronic  
program guide information ~~is to be when~~ displayed on a screen, and wherein the first information  
and the second information each include a tag to enable data included therein to be associated  
with the layout information.

13. (Currently Amended) A display controlling apparatus, comprising:  
first acquiring means for acquiring, ~~from within electronic program guide~~  
~~information hierarchized into~~ at least one of first and second information, the first information  
~~which designates~~ designating predetermined information of electronic program guide  
information on specific broadcasts of a program and second information ~~to be being~~ referred to

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

by the first information for general information on said program, ~~at least one of the first information and the second information~~

wherein the first information, which may change, comprises electronic program guide information, associated with a program; and

wherein the second information, which may not be changed, comprises electronic program guide information associated with a program;

second acquiring means for acquiring layout information which relates to ~~of the electronic program guide information regarding a layout when of the electronic program guide information is to be when~~ displayed on a screen; and

producing means for producing display information to be used to display the electronic program guide information from at least one of the first information and the second information, and the layout information, and wherein the first information and the second information each include a tag to enable data included therein to be associated with the layout information.

14. (Original) A display controlling apparatus according to claim 13, further comprising display means for displaying the electronic program guide information.

15. (Currently Amended) A display controlling apparatus according to claim 13, wherein said producing means retrieves information ~~necessary to be displayed~~ from the first information or the second information in response to the layout information and produces the display information in response to the retrieved information and the layout information.

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

16. (Currently Amended) A display controlling apparatus according to claim 15, wherein said producing means hierarchizes the retrieved information into first intermediate information ~~regarding which relates to~~ contents to be displayed at individual layout positions based on the layout information and into second intermediate information to be referred to by the first intermediate information and designates the first information.

17. (Original) A display controlling apparatus according to claim 16, wherein said producing means sorts the first information to be designated as the second intermediate information.

18. (Original) A display controlling apparatus according to claim 17, further comprising instructing means for instructing sorting of the first information to be designated as the second intermediate information.

19. (Original) A display controlling apparatus according to claim 13, wherein said first or second acquiring means acquires at least one of the first information, the second information and the layout information from a recording medium.

20. (Original) A display controlling apparatus according to claim 13, wherein said first or second acquiring means fetches at least one of the first information, the second information and the layout information from data transmitted thereto by radio or wire communication.

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

21. (Currently Amended) A display controlling method, comprising the steps of:

~~acquiring, from within electronic program guide information hierarchized into at least one of first information and second information, first information which designates designating predetermined information of electronic program guide information on specific broadcasts of a program and the second information to be being referred to by the first information for general information on said program, at least one of the first information and the second information~~

~~wherein the first information, which may change, comprises electronic program guide information, associated with a program; and~~

~~wherein the second information, which may not be changed, comprises electronic program guide information associated with a program;~~

~~acquiring layout information regarding which relates to a layout of the electronic program guide information when the electronic program guide information is to be displayed on a screen; and~~

~~producing display information to be used to display the electronic program guide information from at least one of the first information and the second information, and the layout information, and wherein the first information and the second information each include a tag to enable data included therein to be associated with the layout information.~~

22. (Currently Amended) A ~~transmission medium for transmitting computer program product comprising a program, the program including being operable to perform the~~ steps of:

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

acquiring, at least one of first information and second information, from within electronic program guide information hierarchized into the first information which designates designating predetermined information of electronic program guide information on specific broadcasts of a program and the second information to be being referred to by the first information for general information on said program, at least one of the first information and the second information

wherein the first information, which may change, comprises electronic program guide information, associated with a program; and

wherein the second information, which may not be changed, comprises electronic program guide information associated with a program;

acquiring layout information regarding which relates to a layout of the electronic program guide information when the electronic program guide information is to be displayed on a screen; and

producing display information to be used to display the electronic program guide information from at least one of the first information and the second information, and the layout information, and wherein the first information and the second information each include a tag to enable data included therein to be associated with the layout information.

23. (Currently Amended) An information providing system, comprising:

hierarchizing means for hierarchizing electronic program guide information to be provided into first information which designates predetermined information on specific broadcasts of a program and second information to be referred to by the first information for general information on said program,

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

wherein the first information, which may change, comprises electronic program guide information, associated with a program; and

wherein the second information, which may not be changed, comprises electronic program guide information associated with a program;

first providing means for providing at least one of the ~~hierarchized~~-first information and the second information;

second providing means for providing layout information ~~from within the electronic program guide information~~ which relates to a layout ~~when of the electronic program guide information is to be~~ when displayed on a screen;

first acquiring means for acquiring at least one of the first information and the second information;

second acquiring means for acquiring layout information ~~of the electronic program guide information regarding which~~ relates to a layout when of the electronic program guide information is to be when displayed on a screen; and

producing means for producing display information to be used to display the electronic program guide information from at least one of the first information and the second information, and the layout information, and wherein the first information and the second information each include a tag to enable data included therein to be associated with the layout information.

24. (Currently Amended) An information providing method, comprising the steps of:

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

hierarchizing electronic program guide information to be provided into first information which designates predetermined information on specific broadcasts of a program and second information to be referred to by the first information for general information on said program.

wherein the first information, which may change, comprises electronic program guide information, associated with a program; and

wherein the second information, which may not be changed, comprises electronic program guide information associated with a program;

providing at least one of the ~~hierarchized~~ first information and the second information;

providing layout information ~~from within the electronic program guide information~~ which relates to a layout ~~when of~~ the electronic program guide information ~~is to be~~ when displayed on a screen;

acquiring at least one of the first information and the second information;

acquiring layout information ~~of the electronic program guide information~~ regarding which relates to a layout when the electronic program guide information is ~~to be~~ displayed on a screen; and

producing display information to be used to display the electronic program guide information from at least one of the first information and the second information, and the layout information, and wherein the first information and the second information each include a tag to enable data included therein to be associated with the layout information.

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

25. (Currently Amended) ~~A transmission medium for transmitting computer~~  
program product comprising a program, the program including being operable to perform the  
steps of:

hierarchizing electronic program guide information to be provided into first  
information which designates predetermined information on specific broadcasts of a program  
and second information to be referred to by the first information for general information on said  
program;

wherein the first information, which may change, comprises electronic program  
guide information, associated with a program; and

wherein the second information, which may not be changed, comprises electronic  
program guide information associated with a program;

providing at least one of the ~~hierarchized~~ first information and the second  
information;

providing layout information ~~from within the electronic program guide~~  
~~information which relates to a layout when of the electronic program guide information is to be~~  
when displayed on a screen;

acquiring at least one of the first information and the second information;

acquiring layout information ~~of the electronic program guide information~~  
~~regarding which relates to a layout when the electronic program guide information is to be~~  
displayed on a screen; and

producing display information to be used to display the electronic program guide  
information from at least one of the first information and the second information, and the layout

U.S. Appl. No. 09/844,354  
Reply to Office Action dated July 1, 2005

PATENT  
450100-4138.1

information, and wherein the first information and the second information each include a tag to enable data included therein to be associated with the layout information.
